

## Slimprinter under Windows 2000 Terminalserver

Slimprinter is also available under Windows 2000 Terminalserver. Only one difference exists to other Windows Server-Operating systems:

Usage without explorer (one or more applications will be started directly with the terminal service client)

Since the session server has to be started at initiation of the terminal session, some problems may arise when using Slimprinter without Explorer.

Therefore the tool "SlimBootstrap.exe" will be installed during installation of the server component. This tool can be found at C:\Program Files\Slimprinter by default. SlimBootstrap.exe starts other programs, which are defined in the textfile Proggis.txt (in the same directory as SlimBootstrap.exe, one program entry per line). To set up different configurations for several users you can set up further text files with different names. The file name to be used will then be appended as parameter (divided by blanks) to the entry of SlimBootstrap.exe. If you have, for example, the file MyProgs.txt, you have to enter

C:\Program Files\Slimprinter\SlimBootstrap.exe C:\<PATH>\MyProgs.txt as  
Program call for the RDP connection.

In your self-defined text file enter the complete path to an executable file in each line. The following placeholders are valid in these line entries:

"%USERNAME%"

"%WINDIR%"

"%USERDOMAIN%"

"%USERPROFILE%"

"%ALLUSERPROFILE%"

"%APPDATA%"

"%COMPUTERNAME%"

"%COMSPEC%"

"%HOMEDRIVE%"

"%HOMEPATH%"

"%LOGONSERVER%"

"%OS%"

"%TEMP%"

"%TMP%"

On every line it is possible to pass one parameter to manage the window status. The last

2 characters switch to following behaviour:

/m → maximized window

/n → normal window

/h → minimized window

Example.: %WINDIR%\System32\notepad.exe /n → Notepad with normal Window

Without any parameter the window state is always maximized.

The program Bootstrap.exe terminates automatically if all programs that have been started through this mechanism are terminated. The session server will then be terminated as well and the session will be closed.

### Attention!

Don't launch SlimBootstrap.exe via a Loginscript, always set the reference in the corresponding rdp-file for mstsc.exe..

Please use loginscripts only for drivemapping. Otherwise the session will hang in logoutprocess or mstsc.exe will crash.

Run programs always from Proggis.txt, never via a batch-file.

Example:

right

false

C:\Programme\Test\Test1.exe /n

C:\Programme\Test\Test.bat /n

C:\Programme\Test\Test2.exe /m

(Test.bat)

C:\Programme\Test\Test1.exe

C:\Programme\Test\Test2.exe
